

Sabre Visitor | Secure Entry Management Made Simple

Start Free

The complete compliance and liability engine. Battle-tested in South Africa—one of the world's most demanding security environments.

First Month **FREE**
on all paid plans.

Visitors Managed.

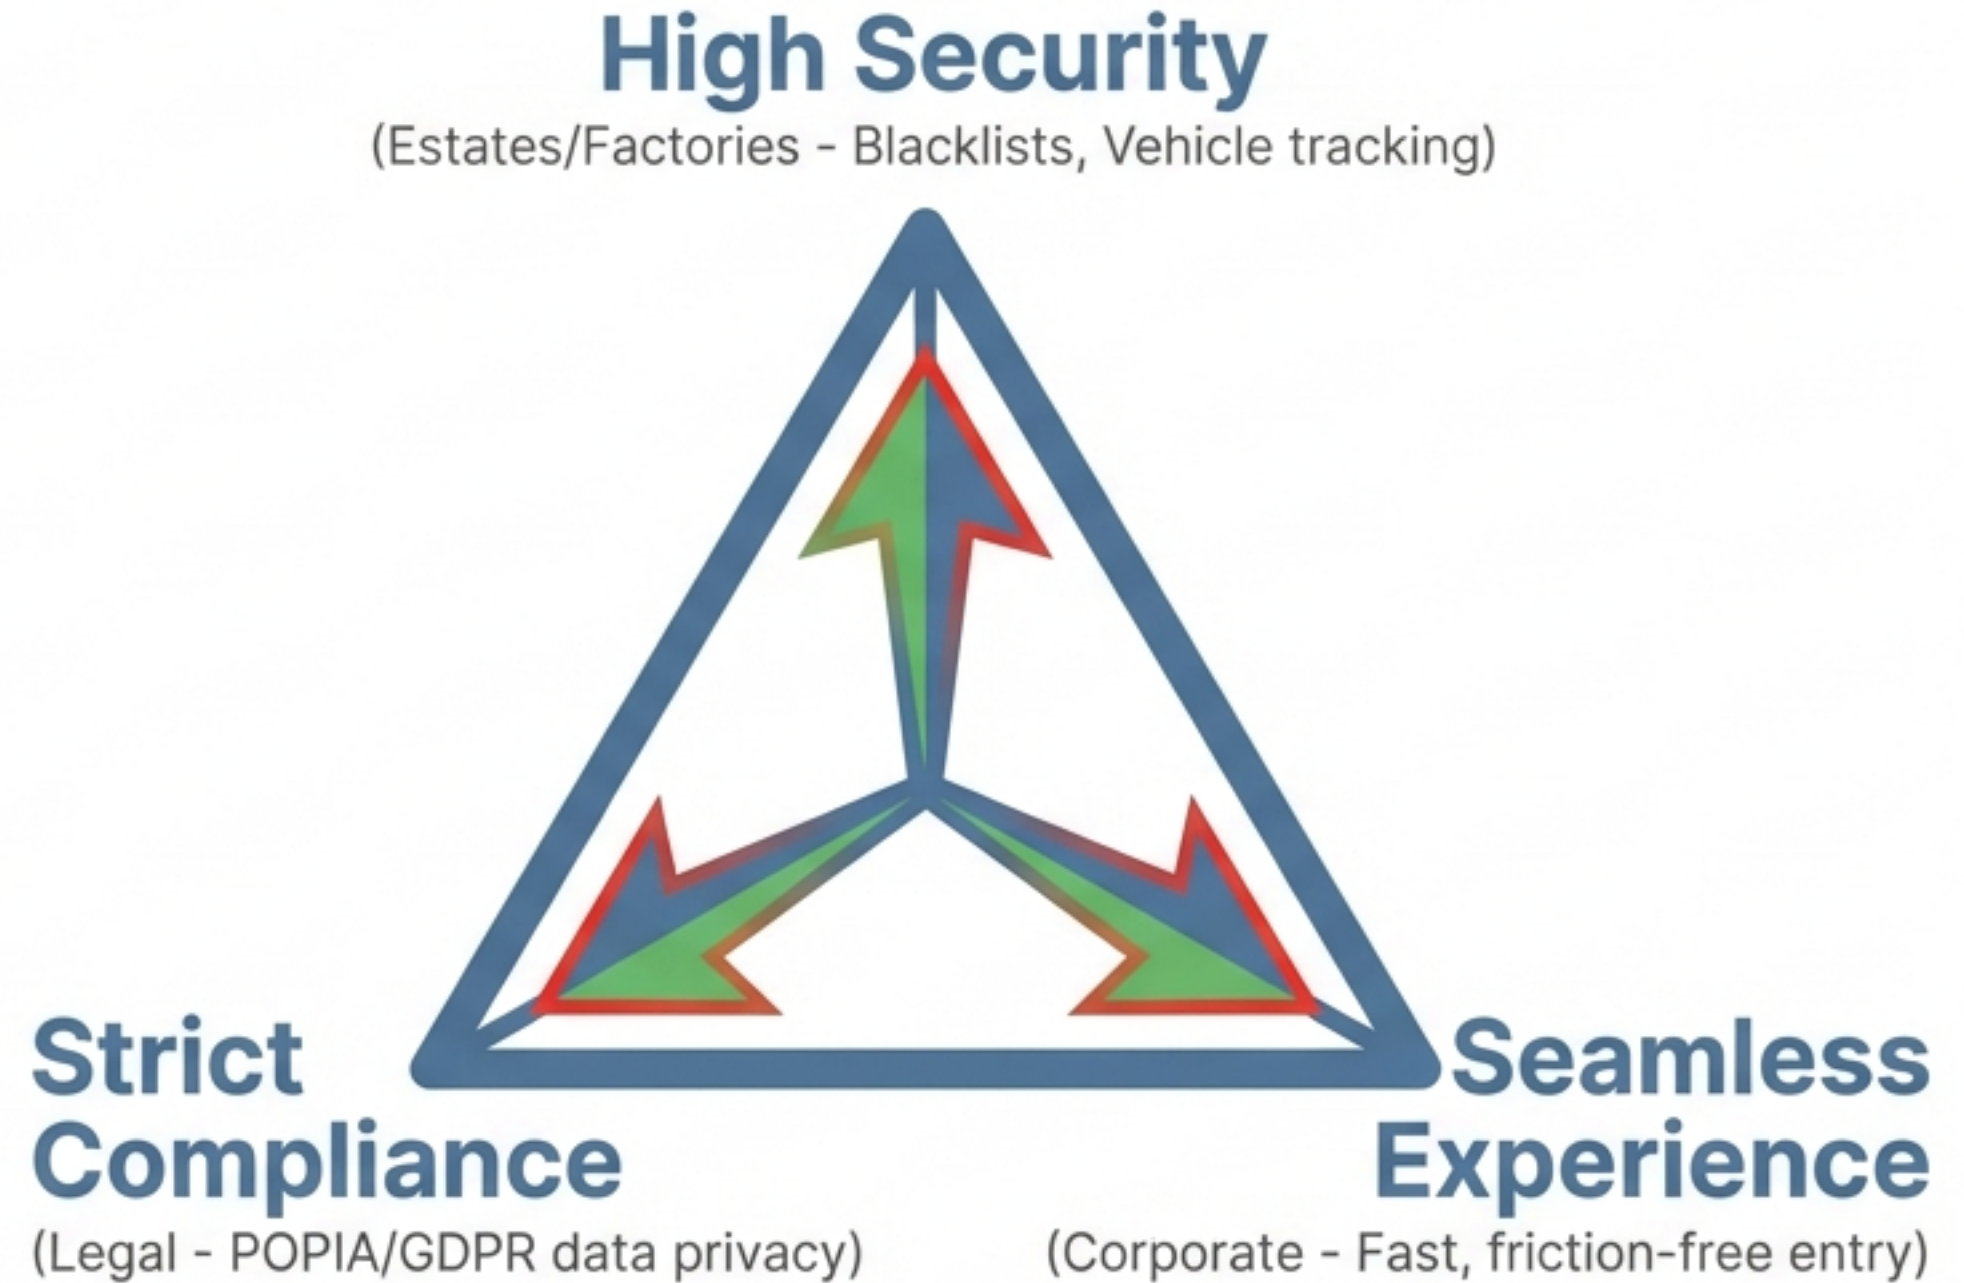

Entry Secured.

Liability Covered.

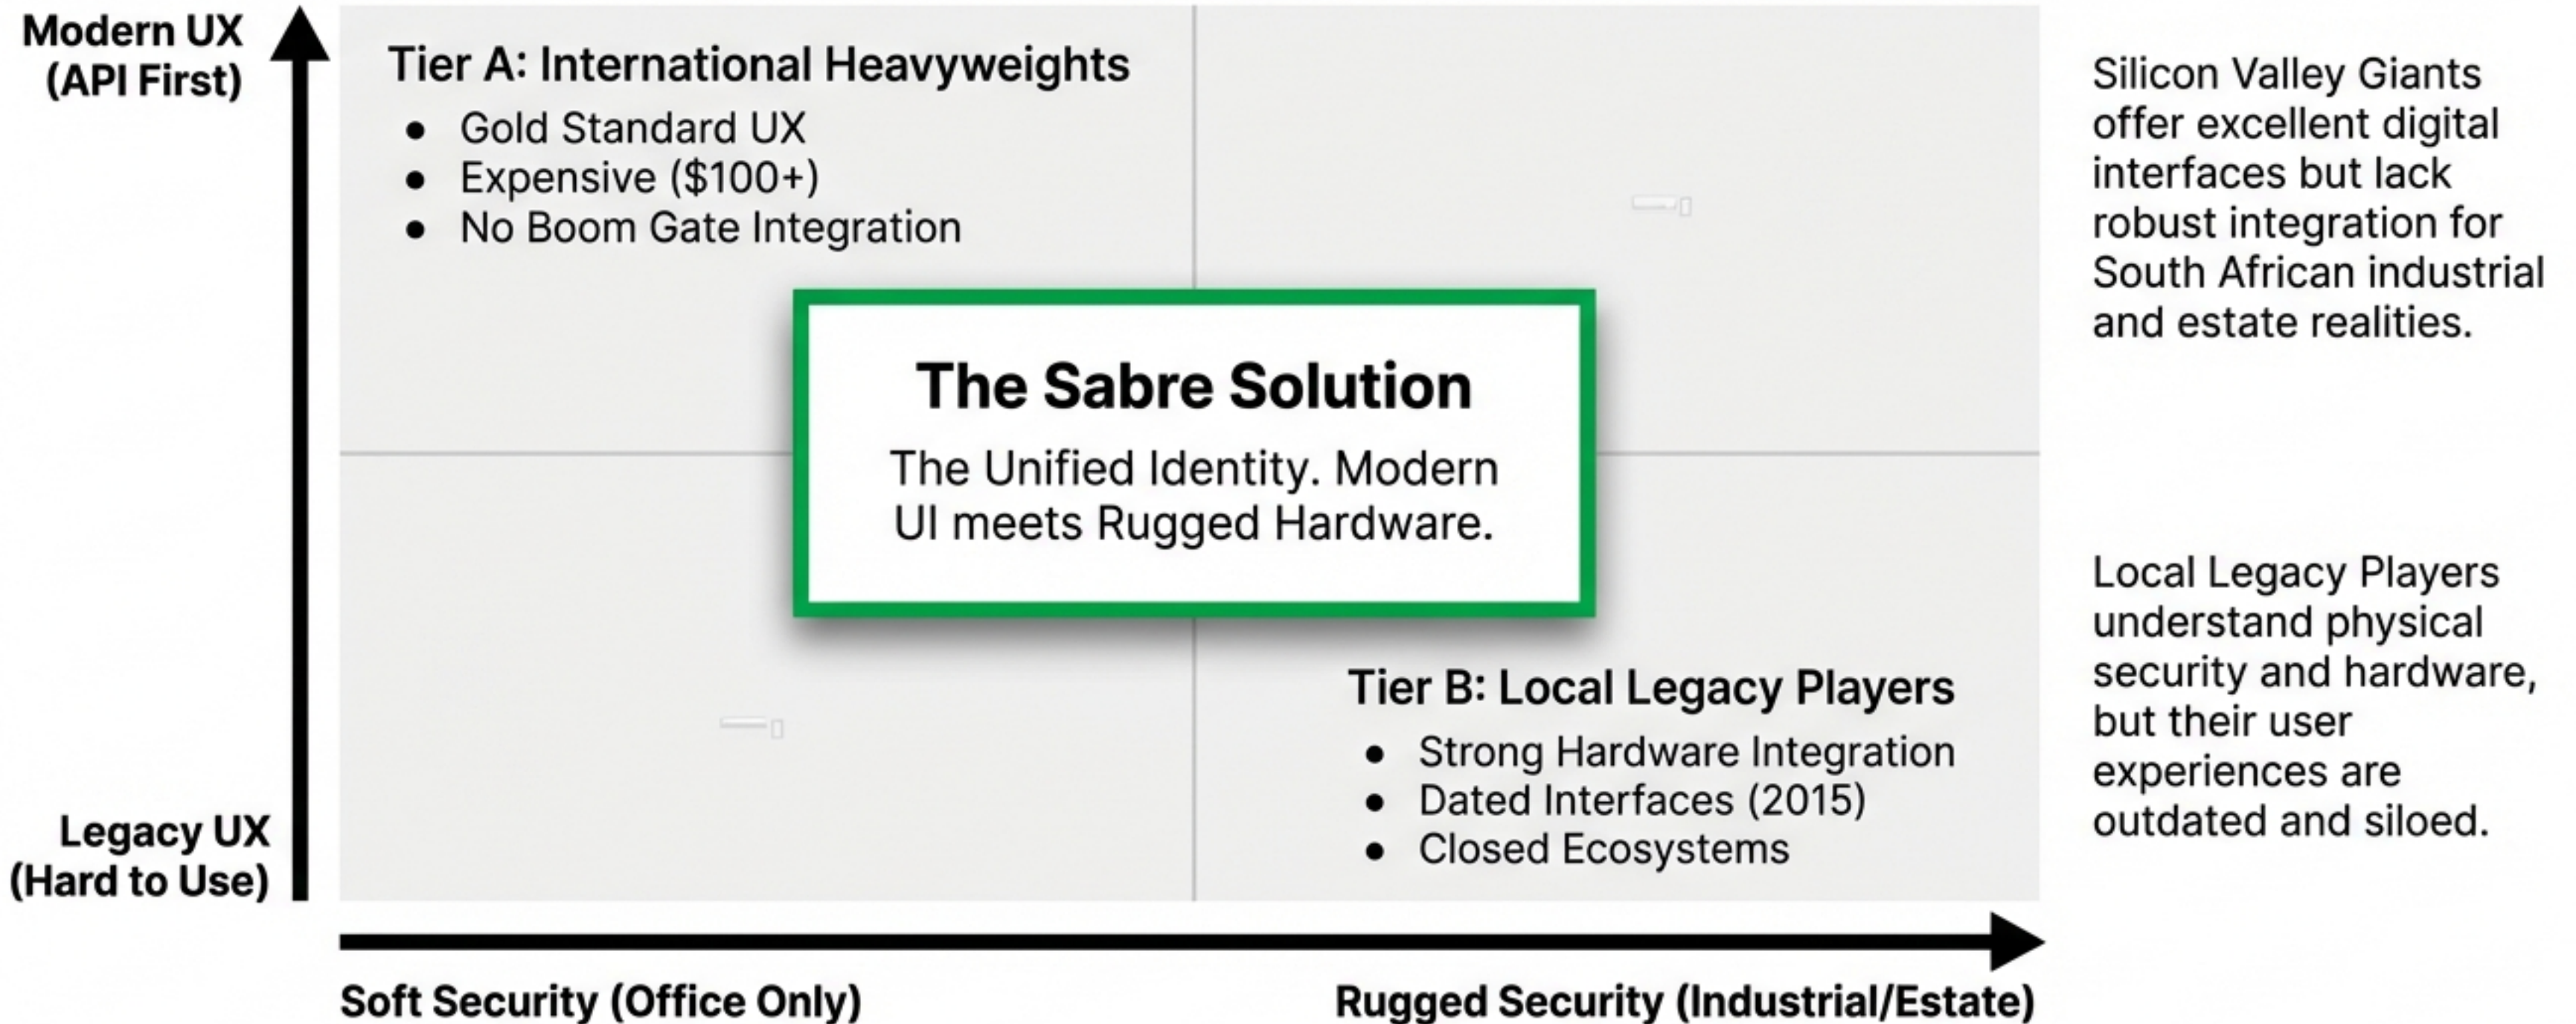

The Modern Security Dilemma

Property managers are forced to balance three competing demands. Traditional systems usually fail at two of them. A visitor system isn't just a digital logbook anymore—it is a Compliance and Liability engine.

*Failing to anonymise data creates legal risk.
Failing to track vehicles creates security risk.*

Bridging the Gap Between Silicon Valley and South African Reality

The One-Scan Journey

From invitation to entry in seconds. No paperwork, no delays, no confusion.

1. Host Invites

Create invite via Web or App. Enter name & vehicle details.

2. Visitor Receives

WhatsApp/SMS with QR, PIN, and Google Maps location.

3. Guard Scans

One scan at gate. Validates invite, logs photo & timestamp.

4. Host Notified

Instant arrival alert. Creates full audit trail.

The 'Triple-Scan' Verification Protocol

Designed for high-security environments where knowing WHO is entering is not enough—you need to know **WHAT** they are driving.

Vehicle Licence Disc

The illustration shows a circular vehicle licence disc with the text 'VEHICLE LICENCE DISC' at the top. Below this, there are several 'Data:' labels followed by input fields. A magnifying glass is positioned over the disc, highlighting the details.

- Checks expiry dates.
- Matches against local blacklists.
- Optimised for low-light OCR.

Driver's Licence

The illustration shows a driver's licence with a photo and text. A green laser line is shown scanning the face of the ID.

- OCR scanning of ID face.
- Stores high-res image record for criminal investigations.

Digital QR

The illustration shows a smartphone displaying a QR code, which is being scanned by a green laser.

The 'Fast Lane' for pre-vetted guests.

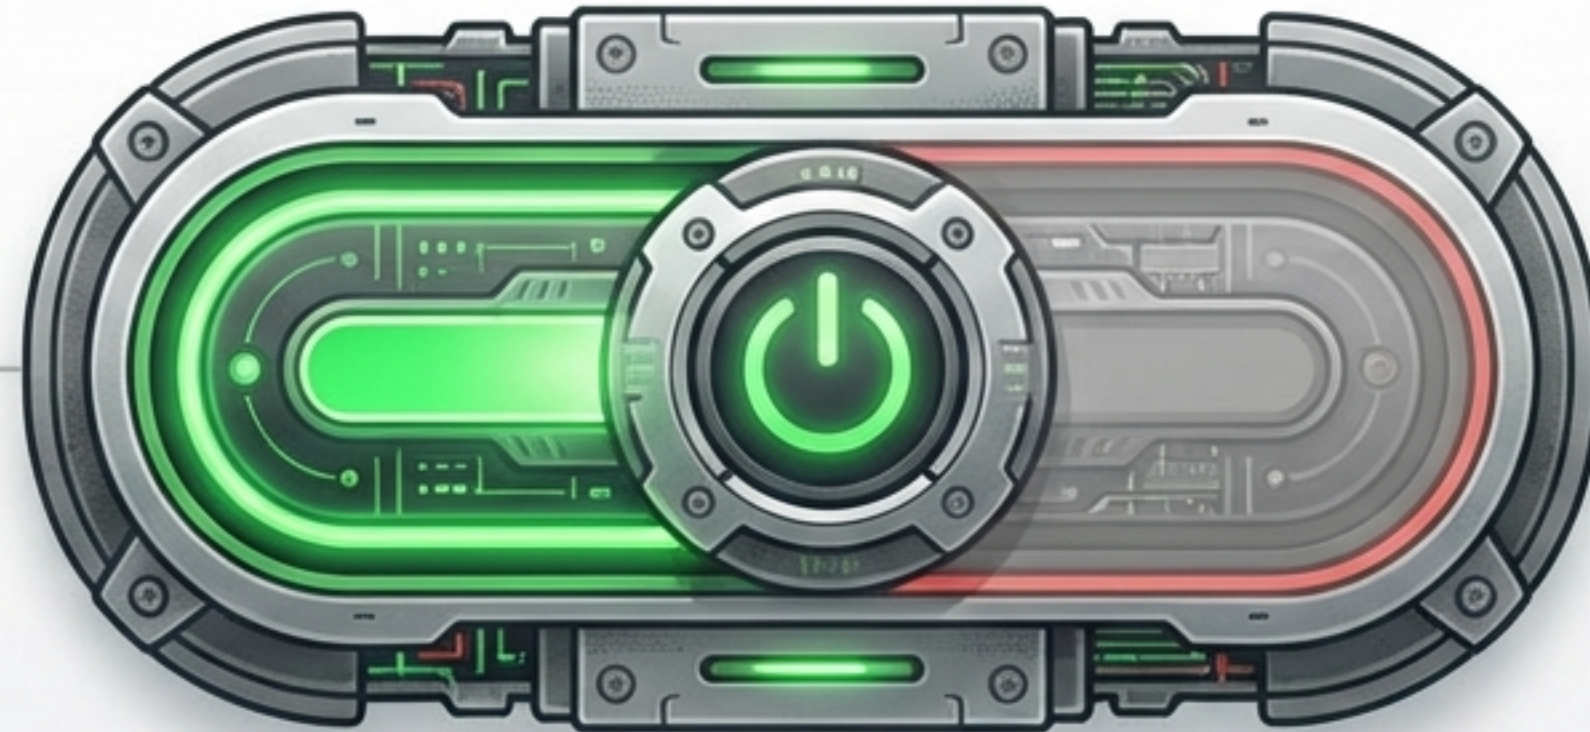

Key Feature: Blacklist Alerts. Silent vibration for guards and instant notifications for managers when flagged vehicles are detected.

The Privacy Toggle: Compliance vs. Liability

International privacy laws (GDPR) and local acts (POPIA) are strict. Sabre Visitor offers a unique 'Ghost Mode' to automate compliance.

State A: Default (Privacy/POPIA)

Auto-Anonymise.
Data scrubbed after
14 days. Keeps
database lean.

State B: Override (Security Focus)

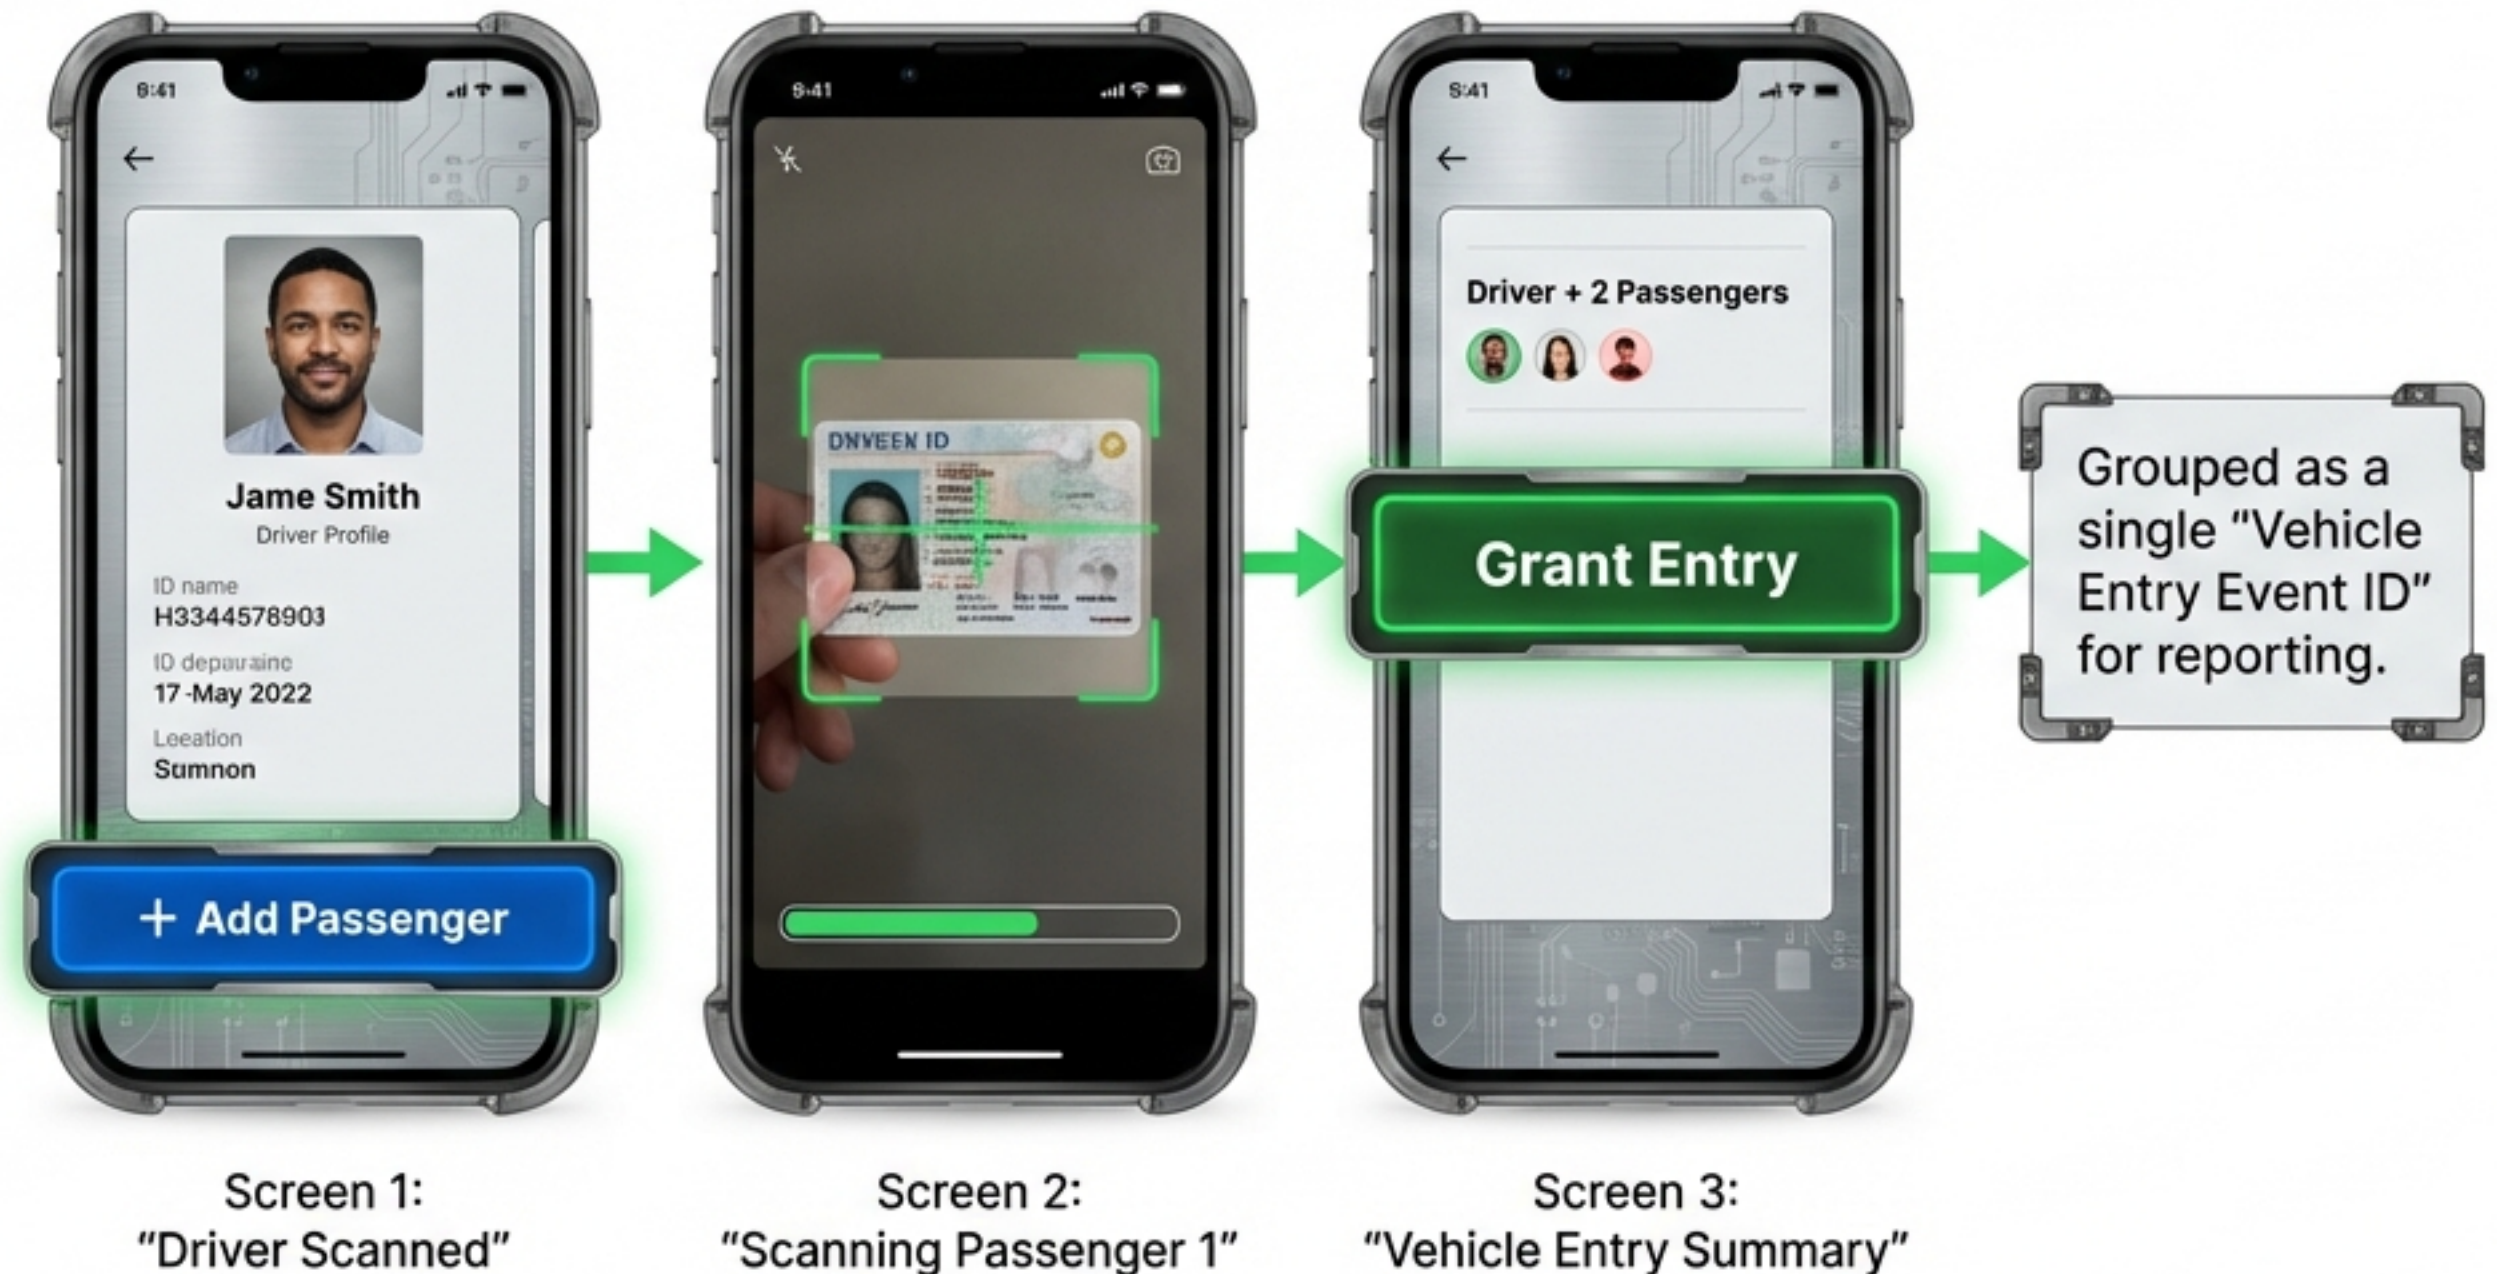

Extended Retention.
Client toggles for
high-risk sites.

System Warning: By enabling Extended Retention,
the client assumes liability for data retention.
Sabre acts only as the data processor.

Intelligent Workflow Logic

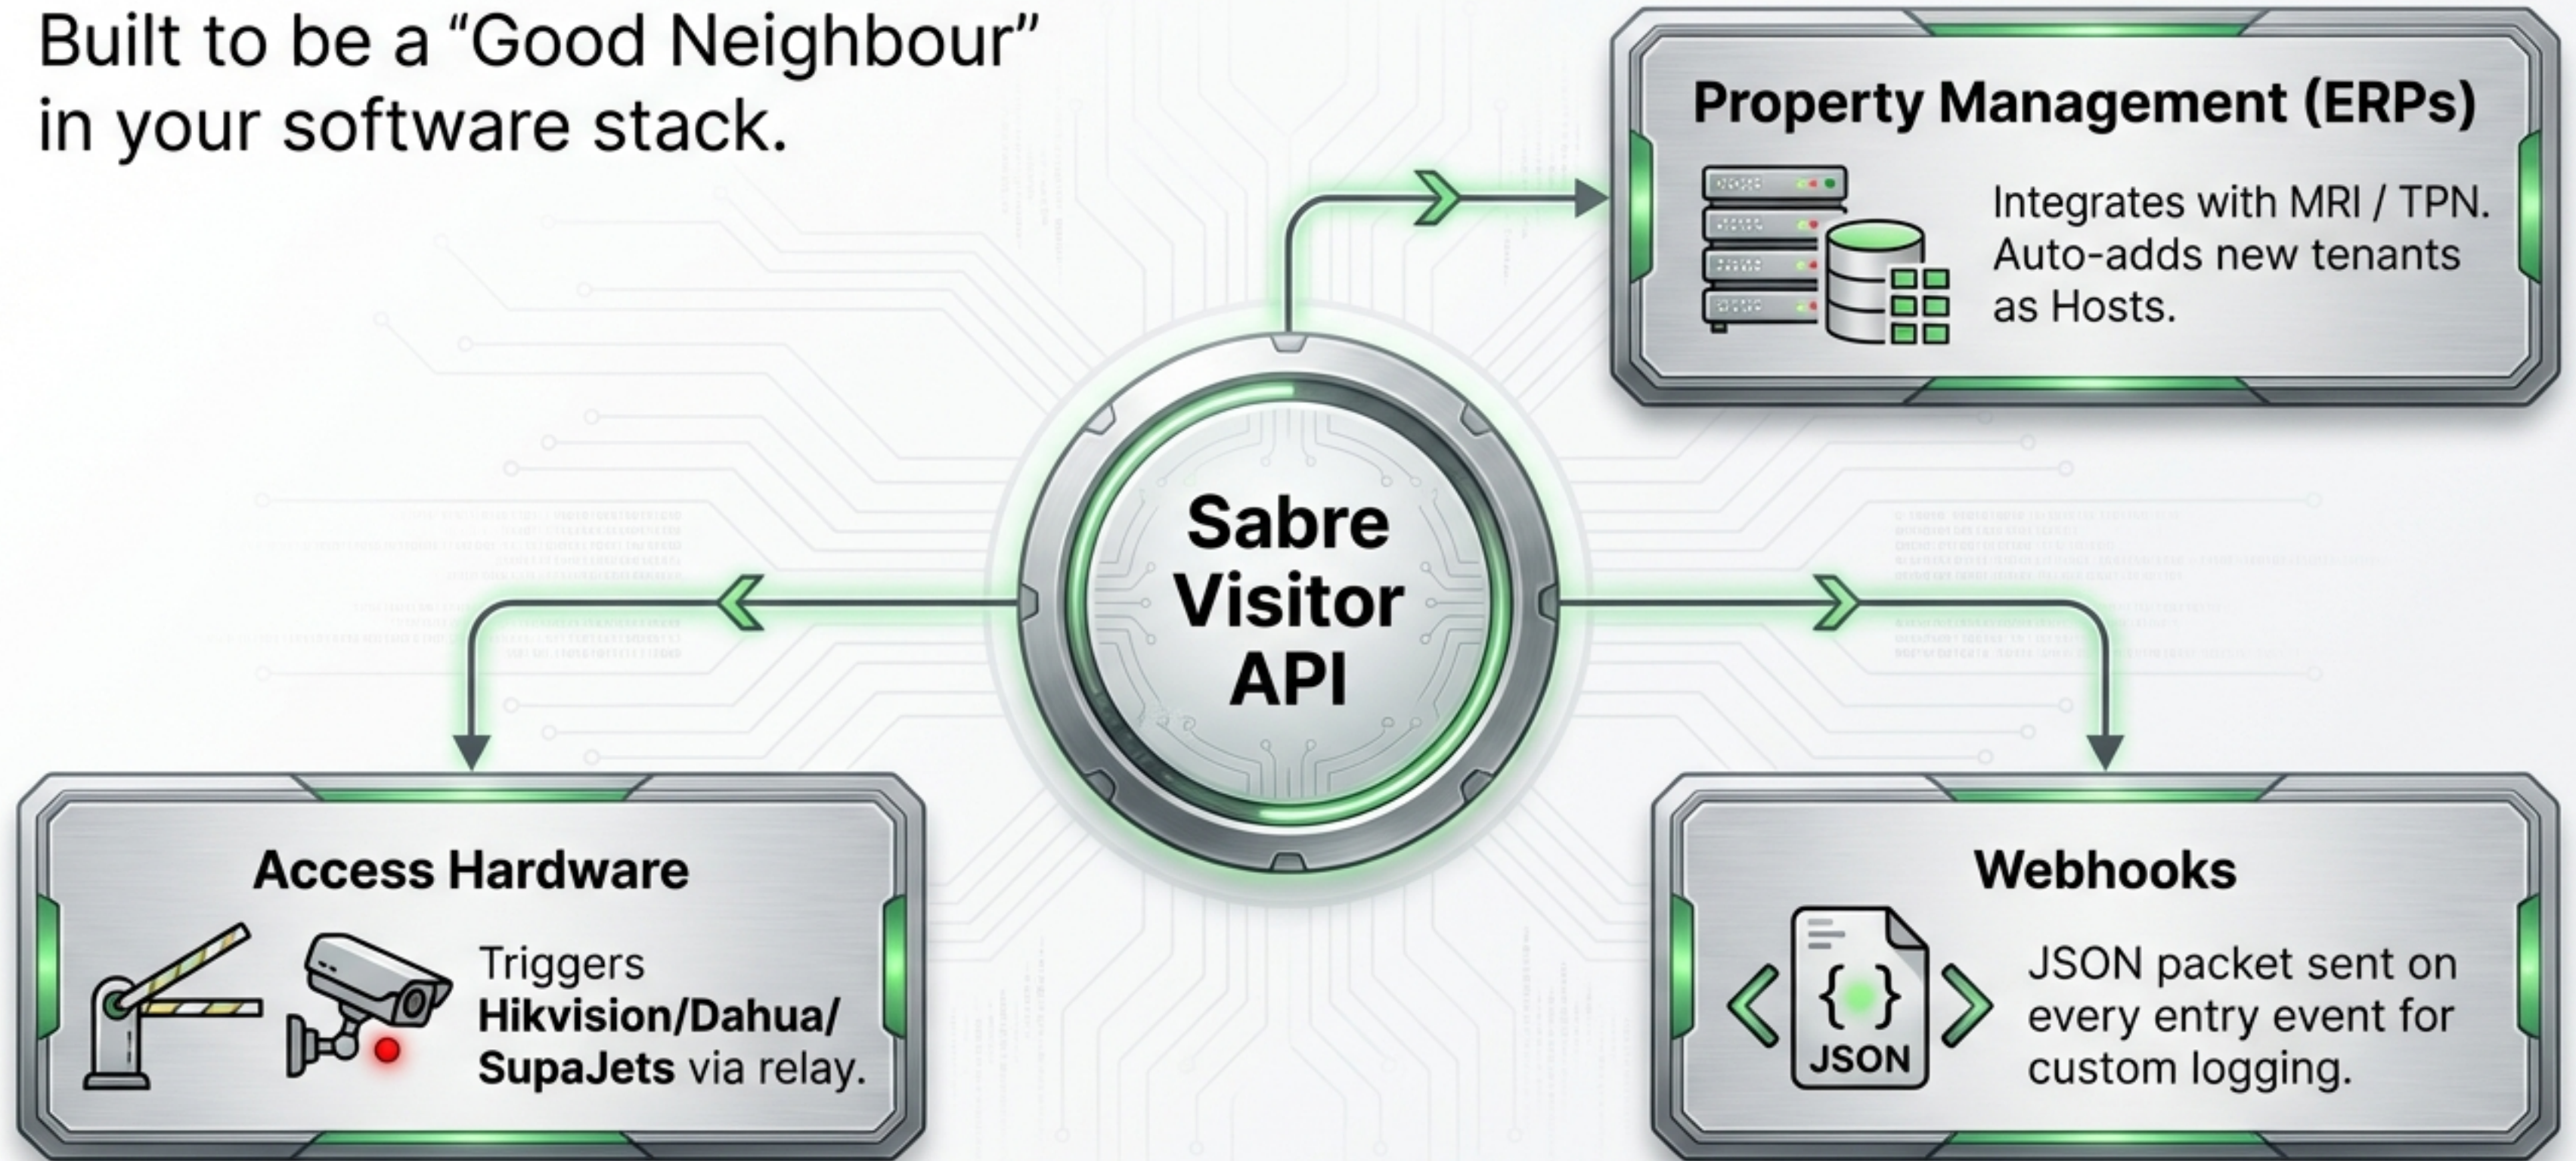

Solving the "Queue at the Gate" problem with Multi-Passenger Carousel Entry.

Most systems require a full form fill for every person, causing traffic jams. Sabre uses a linear Carousel UI.

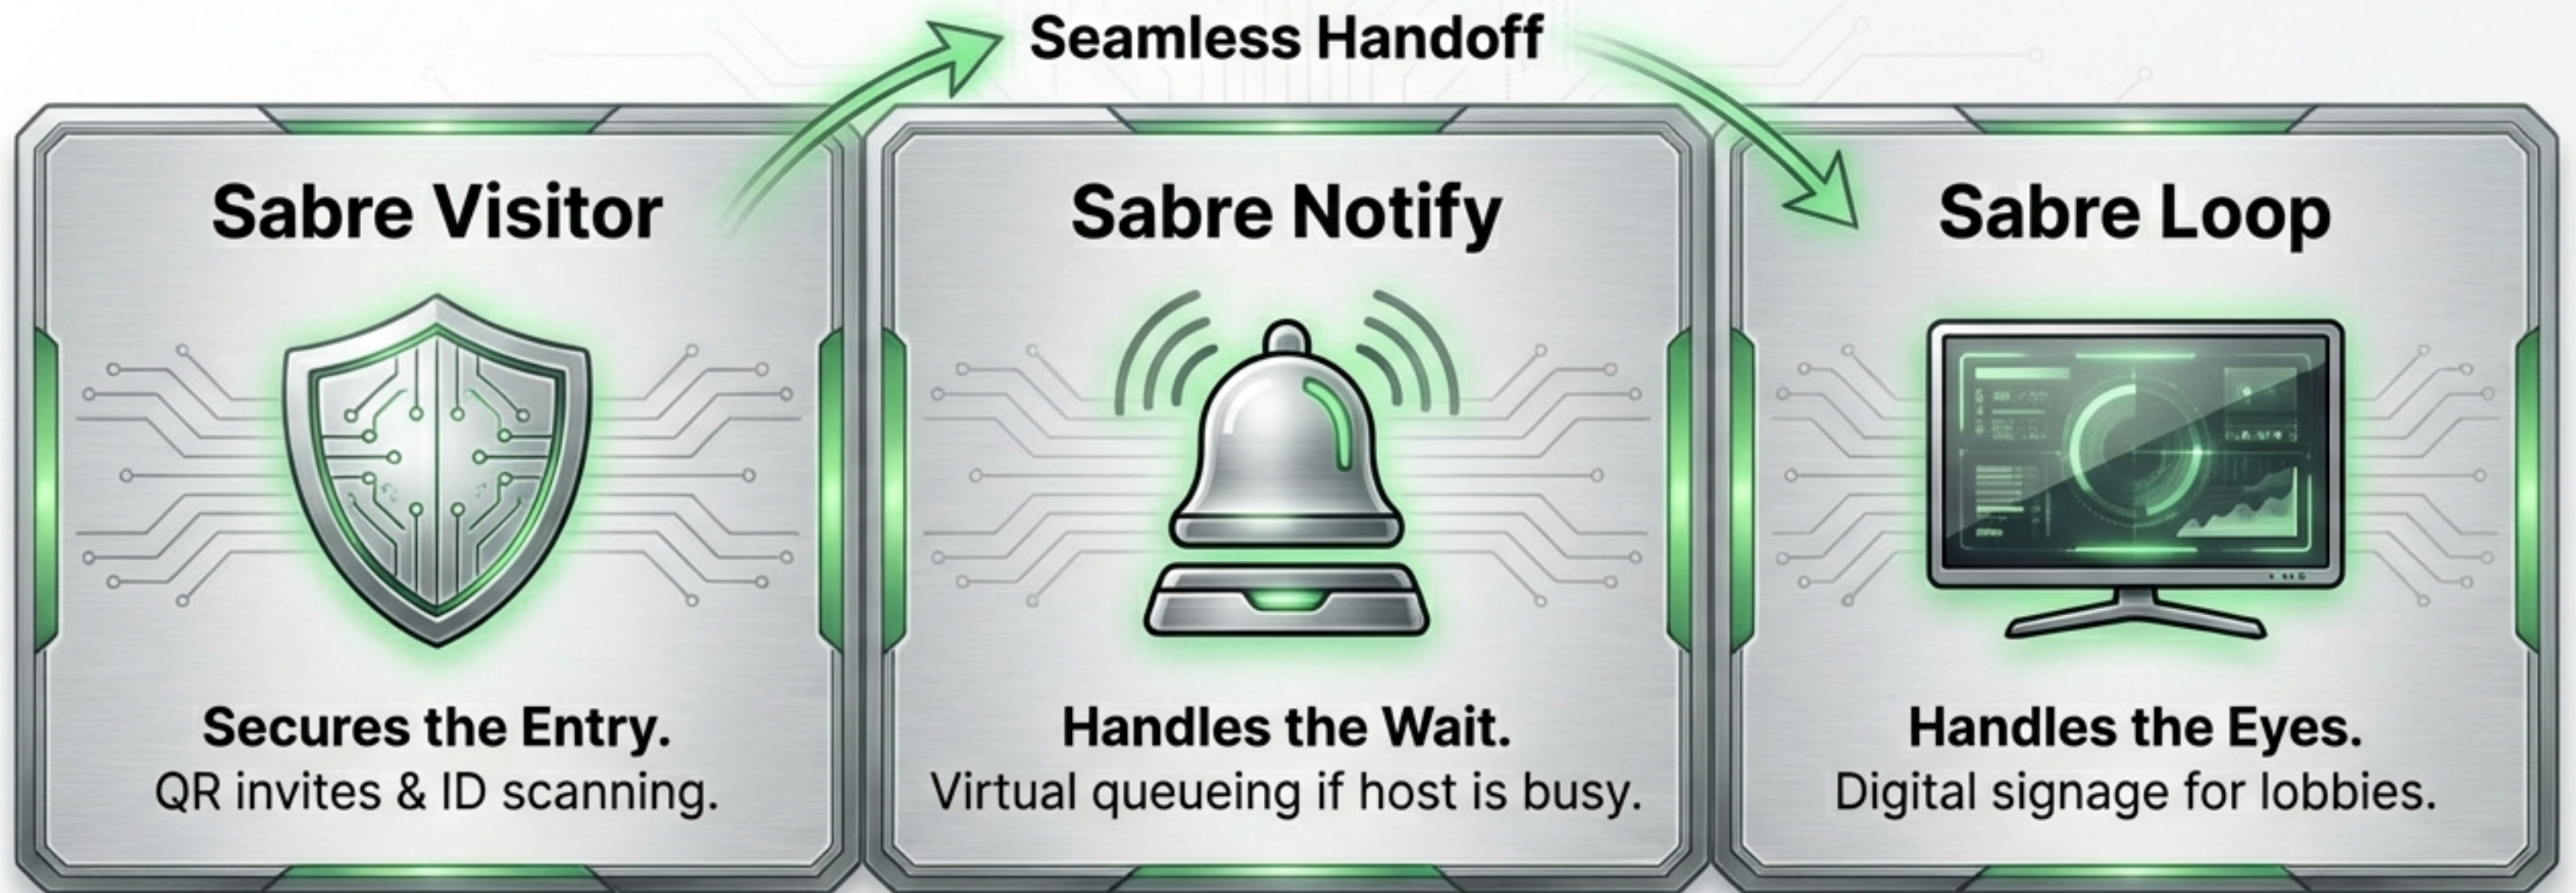

An API-First Architecture

Built to be a "Good Neighbour"
in your software stack.

Part of the Sabre Ecosystem

A unified solution for the entire visitor experience.

When a visitor checks in, they are handed off to Notify if the host is busy.

Perfect for Every Property

Scales from a home office to a multi-site industrial park.

Office Buildings
(Reception & Meeting Rooms)

Estates
(Residential & Gated Communities)
